Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Response to Amendment

This is a response to the amendment filed August 14, 2002. Claims 1-77 are pending.

Response to Arguments

1. Applicant's arguments filed August 14, 2002 have been fully considered but they are not persuasive.

As indicated in the interview on August 7, 2002, amending claim 1 to include vague and broad terminology such as in the phrase "wand assembly is capable of causing the actuating member to be immobilized sufficiently to prevent ignition of the fuel." does not overcome the prior art. There is no positive recitation for the necessity for mechanical prohibition of actuation. Therefore, when the lighter assembly of Liang is in the closed position the wand assembly is **capable of causing** the actuating member to be immobilized **sufficiently** to prevent ignition of the fuel.

Additionally, claim 68 does not overcome the prior art. The claim is directed to a conventional lighter and no limitations have been presented incorporating a pivotal wand or any other novel features.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Art Unit: 3743

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

3. Claims 1-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Liang.

Liang clearly discloses a lighter having a housing (1, 1') with a supply of fuel, as recited in column 1, lines 66-69, column 2, lines 1-3 and seen in figure 1; an actuating member movable to selectively ignite the fuel where the actuating member is associated with the housing, as seen in figure 7; and a movable wand assembly associated with the housing and operatively associated with the actuating member such that when the wand assembly is in a first position the wand assembly is capable of causing the actuating member to be immobilized sufficiently to prevent ignition of the fuel, as recited in column 2. When the wand is in the closed position, actuation is sufficiently prevented.

4. Claims 68-77 are rejected under 35 U.S.C. 102(a or e) as being anticipated by Sung in US Patent No. 6,213,759.

Sung clearly discloses a lighter (10') having a housing assembly (12) with a supply of fuel (26); a wand assembly (14) associated with the housing assembly and having a nozzle (16); a conduit (28) for transporting fuel from the supply to the nozzle; an ignition assembly for igniting fuel at the nozzle; and an

actuating member (18) operable to selectively release fuel from the nozzle and actuate the ignition assembly, wherein the conduit contains a lead from the ignition assembly for igniting fuel at the nozzle, as seen in figure 2.

Allowable Subject Matter

5. Claims 22-67 are allowed.

Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
